1. Come up with a team name for your group.

2. Please list the names and PIDs of the team members who are present today (or knowingly absent)

3. Conduct a stand-up meeting as discussed in class on 8/30. Summarize the details for each student here.

4. Based on the project details provided in class and on the course GitHub repository, what questions do you have about the project this semester?

5. Provide your preliminary project idea (or set of ideas). This is not a commitment to a project.

---

1. S.A.Y.S.

2.

- Alex Urbina (ualexander) - present
- Yuxuan Guo (gyx001031) - present
- Sri Vangaru (sriv04) - present
- Sean Sullivan (ssean03) - present

3. We have done nothing so far, since this is our first group meeting. We plan to brainstorm initial ideas for our project today. There is nothing blocking us right now.

4. Will we have the opportunity to implement our project (code)? Does this come with extra credit?

5. We want to make a progress tracker for any software project to present to clients the live-progress being made according to features they requested. Input would be an internal team progress tracker such as Jira, and output a prettier formatted dashboard with easy to understand progress details.
